1. Overview of the Practicum Engagement

The practicum engagement was completed at STMicroelectronics, a global semiconductor manufacturing company engaged in the design, development, and production of semiconductor technologies and products. The trainee was assigned to B2F2 Operations 2/3, where the practicum focused on understanding operational processes and contributing to department-level improvement initiatives through digital solutions.

The practicum was conducted onsite, under the supervision of Sir Judioz Manejero, and covered a total of 480 hours beginning on May 4. During the engagement, the trainee served as an On-the-Job Trainee (OJT) and was given two main tasks, one of which was the development of a reporting-related digital solution for the department.

One of the major assignments given during the practicum was the development of the MBO Sawing Report System, a workflow-based internal application intended to digitize an existing Excel-based reporting process. Prior to the system, the department relied on manual Excel input for MBO sawing reports, which made the process dependent on file handling, manual encoding, and user-by-user execution practices. This created issues in standardization, ease of retrieval, workflow control, and long-term maintainability.

The system was assigned as a practical solution to improve the department's reporting process by transforming it from a manual, file-based setup into a more structured internal platform. The trainee was involved in the frontend, backend, database, testing, documentation, and deployment presentation aspects of the project. This made the practicum engagement not only a technical learning experience but also an opportunity to participate in a real department-level process improvement initiative.

2. Presentation of Output

One of the major outputs developed during the practicum was the MBO Sawing Report System, a web-based internal reporting platform designed to replace the manual Excel workflow previously used by the department. The system was structured to directly address the operational problems observed in the existing process, particularly in terms of standardization, configuration control, validation, and report retrieval.

2.1 Nature of the Output

The developed system digitizes the MBO sawing report process and transforms it into a guided workflow where users can log in, select the proper workflow variant, complete required report sections, validate

entries, save reports, and retrieve previous records. Compared to the manual Excel process, the system introduces stronger control over how reports are created and maintained.

2.2 Key Features and Modules Developed

The following modules and features were developed because they directly addressed the department's reporting problems:

a. User Login and Controlled Access

A login mechanism was implemented to ensure that only authorized users can access the reporting workspace. This improves accountability and helps control who can create or manage reports.

b. Workflow Selection

A workflow selection page was added so users can choose the correct report flow before entering the system. This solves the problem of inconsistent reporting structure and ensures the correct pages are shown depending on the required process variant.

c. Landing Page / Guided Entry Point

A landing page was developed to provide a structured entry point for users, including options such as starting a new report, continuing a draft, and opening an existing file. This improves usability and reduces confusion compared to manually opening and managing multiple Excel files.

d. Digitized MBO Summary and Worksheet Pages

The Excel-based worksheet flow was translated into structured application pages. Instead of depending on manual spreadsheet navigation and free-form updates, the system organizes the report process into workflow-based sections that are easier to complete and review.

e. Admin-Managed MBO Types

An admin module was implemented to manage workflow-specific MBO type values. This removes the need to manually edit fixed values in Excel and gives the department a centralized way to control reporting options.

f. Validation and Error Checking

Validation logic was added to check required fields, guide users to missing information, and reduce encoding mistakes. This feature improves data quality and addresses one of the key weaknesses of the manual Excel process.

g. Historical Tracking and Saved Reports

The system supports report saving and later retrieval, making it easier to review previous work and compare historical results. This is a major improvement over the previous manual setup, where old Excel files had to be searched and opened individually.

h. Backend and Database Support

A backend and database structure were developed to store reports, configurations, and supporting data. This centralized approach improves maintainability and reduces dependency on isolated local files.

2.3 Comparison of Manual Excel Input and the Developed System

Before the development of the MBO Sawing Report System, the department relied on manual Excel-based reporting for MBO sawing documentation. While Excel was usable for recording information, it presented several process limitations, particularly in consistency, validation, centralized storage, and workflow control. The table below summarizes the key differences between the manual process and the developed system.

Aspect	Manual Excel Process	Developed System (MBO Sawing Report System)
Data Entry	Free-form; depended on user discipline and familiarity with the file	Guided, workflow-based entry through structured application pages
Validation	Mostly manual; fields could be left incomplete	Built-in validation checks required fields and flags missing information
Access Control	No controlled access; any user could open the file	Login-based, controlled access for authorized users only
Configuration	Manual editing of fixed values inside Excel	Centralized, admin-managed configuration of MBO type values
Retrieval	Manual searching and opening of individual files	Centralized saving with structured historical tracking and retrieval
Maintainability	Dependent on isolated local files	Centralized backend and database support for long-term maintainability

In contrast, the developed system transformed the reporting process into a structured internal application. It introduced controlled access, workflow-based navigation, validation logic, centralized saving and retrieval, and admin-managed configuration. This reduced manual dependency and improved the department's ability to standardize report preparation.

2.4 Tasks Performed During Development

To complete the system, the following tasks were carried out during the practicum:

- Digitized the existing Excel-based MBO reporting flow

- Translated worksheet logic into a structured web-based workflow
- Implemented login and controlled access
- Created workflow-based page loading and navigation
- Developed admin-managed MBO type configuration
- Added validation and guided correction behavior
- Added report saving and retrieval functionality
- Included historical tracking support
- Performed testing and debugging
- Prepared technical explanations and deployment presentation materials

2.5 Screenshots of Developed Modules

Figure 1. Login Page of the MBO Sawing Report System

Figure 1 shows the login page of the MBO Sawing Report System. This module provides controlled user access and serves as the entry point to the application. It supports authenticated access for authorized users before entering the reporting workspace.

Figure 2. Workflow Selection Module

Figure 2 shows the workflow selection module. This page allows the user to select the correct workflow variant before starting the report process. This feature addresses the problem of inconsistent report structure by ensuring that the reporting flow matches the required operational setup.

Figure 3. Landing Page of the Reporting Workspace

Figure 3 shows the landing page of the reporting workspace. This page serves as the structured entry point for users after workflow selection. It provides access to report creation, draft continuation, file import, and workflow change options, improving usability over the previous manual Excel process.

Min	0.2038	0.2051
Max	0.2155	0.2200
Avg	0.2112	0.2115

Figure 5. Sample Measurement Worksheet Page

Figure 5 shows a sample worksheet page within the system. This module demonstrates how the application organizes measurement-related inputs into a controlled page structure, making the reporting process clearer and more standardized compared to manual spreadsheet entry.

The screenshot displays the 'Machine Buy-Off (MBO) Report' interface. At the top, there are two input fields for 'Kerf Width (Z1)' and 'Kerf Width (Z2)'. The first field contains '200' and is marked 'PASS' with a green background. The second field contains '211' and is marked 'FAIL' with a red background. Below these fields, a specification 'Spec: 200 to 210 μm' is shown. The main section is titled 'Section Review Details' and contains a table with the following data:

Section	Status	Details	Action
Change History	✓ PASS	OK	
MBO Summary	✗ FAIL	Please complete or correct MBO Summary before proceeding. Missing: - mboType - technicianPicker - pEngineerPicker - eEngineerPicker - driPicker - qaCheckPicker - kerfWidthZ2 - rolePickers	Fix
XY Dimension	✓ PASS	OK	
Edge to Center	✓ PASS	OK	
Front Chippings	✓ PASS	OK	
Back Chippings	✓ PASS	OK	
Blade Profile	✓ PASS	OK	
Photos	✓ PASS	OK	
Particle Count	✓ PASS	OK	
ESD	✓ PASS	OK	
Wash Flow Rate Gauge	✓ PASS	OK	

At the bottom of the table, there are buttons for 'Back: Wash Flow Rate Gauge', 'Validate All', and 'Submit'. The top right of the interface shows the user is signed in as 'Dave Cortez' (Employee No: 373508, Roles: Technician) with links for 'Logout' and 'Back to Home'. A 'QUICK ACTIONS' bar includes links for 'Import CSV', 'Open File', 'Open Saved Report', 'Export Excel', 'Save File', 'Save Report', 'Print', and 'Reset'.

Figure 6. Validation and Guided Workflow Support

Figure 6 shows the system's validation and guided workflow support. This feature helps ensure that users complete the necessary fields and follow the correct reporting sequence, addressing one of the weaknesses of the manual Excel process where checking was mostly dependent on human review.

3. Synthesis of the Practicum Engagement

The practicum engagement provided valuable technical and professional learning through participation in a real department-level digital improvement project. By working on the MBO Sawing Report System, the trainee was able to apply classroom knowledge to an actual operational problem and gain deeper understanding of how software solutions are developed, adjusted, and presented in a working environment.

3.1 Technical Learnings Gained

During the practicum, the trainee gained practical experience in several technical areas, including:

- JavaScript modularization, by organizing code into reusable frontend modules
- Flask backend development, by handling backend logic, routing, and API interaction
- Database design and data handling, through the creation and management of application data structures
- Debugging and issue resolution, especially when integrating frontend, backend, and database behavior
- Form validation and workflow control, by implementing structured user guidance and input checking
- UI/UX improvement, by refining the flow of user interaction inside the reporting system
- Configuration-driven design, by allowing admin-managed values instead of hardcoded options
- Testing and refinement, through repeated verification and adjustment of system behavior
- Deployment-oriented thinking, especially when preparing the system for presentation to DTIT

3.2 Professional Learnings Gained

Aside from technical skills, the practicum also helped develop professional competencies such as:

- Communication, particularly in discussing system changes with a supervisor
- Requirement clarification, by translating requests into actual system behavior
- Presentation to stakeholders, especially during the DTIT deployment presentation
- Handling revisions, since many parts of the system had to be refined based on feedback
- Problem-solving under guidance, which is important in a real workplace environment
- Accountability and ownership, by managing a working project from development to presentation

3.3 Realizations

One major realization during the practicum was that solving a department problem is not only about creating a working system, but also about making sure the solution matches actual process needs. A system may function technically, but if it is not aligned with how users work, how admins manage data, and how the department expects reports to be handled, then it will still need significant revision.

Another realization was that software development in an actual company environment involves continuous adjustment. Requirements can change, users may notice new issues after testing, and improvements often come in multiple stages rather than a single final implementation. This highlighted the importance of flexibility, patience, and careful listening during development.

3.4 Challenges Encountered

A challenge I encountered during the practicum was handling repeated changes in requirements while the system was already being developed. As the reporting flow became clearer and more department-specific details were identified, several parts of the system had to be revised to match actual user expectations. This made the trainee realize that in a real work setting, requirements are not always final from the beginning, and a developer must be prepared to revise both design and logic while maintaining consistency in the system.

Another challenge was ensuring that the digital system remained aligned with the original Excel-based process while also improving it. Since the Excel workflow was already familiar to users, the system had to preserve important reporting logic while introducing better control, validation, and organization. This required careful comparison between the manual process and the digital implementation.

3.5 Conclusion

Overall, the practicum engagement was a meaningful and valuable learning experience. It allowed the trainee to contribute to an actual operational improvement effort within the department while gaining hands-on exposure to software development, validation, system design, and presentation to stakeholders. The development of the MBO Sawing Report System demonstrated how digital tools can help improve reporting accuracy, workflow standardization, and data management in a real manufacturing environment. The practicum not only strengthened technical capability but also built confidence in handling real-world project requirements and organizational expectations.

4. Appendices

Only appendices applicable to this practicum track are included below.

1.0 Competency-Based CV

David Joseph N. Cortez Brgy. Puting Kahoy Silang, Cavite 09662565417 djnc61003@gmail.com in https://www.linkedin.com/in/david-joseph-cortez/ github https://github.com/djncortez https://djncortez.netlify.app/	
SKILLS	Languages: Python, Java, Kotlin Frontend: HTML, CSS, JavaScript Data and Analytics: Pandas, NumPy, Matplotlib Database: PostgreSQL, MySQL Tools: VS Code, Git, Android Studio, Supabase, Power BI AI Tools: Claude, Gemini, ChatGPT, Copilot, VO
PROFESSIONAL EXPERIENCE	Ready, Set, Kinder Educational Mobile App - Developed a multi-role Android app (Admin, Teacher, Parent, Student) for monitoring early childhood education for special needs learners, featuring class management, bulk CSV import, and role-based access control. - Built a Teacher Dashboard with per-student game performance metrics and visual score breakdowns across Literacy, Cognitive, and Numeracy categories, scoped to each teacher's enrolled classes. - Integrated Supabase (PostgreSQL, Auth, RLS) with a dual-client architecture for secure admin operations, and Groq AI (LLaMA 3.3-70B) for automated student performance report generation.
EDUCATION	Mapua Malayan Colleges Laguna 2022-2026 Bachelor of Science in Computer Science - Specialization in Data Science and Analytics - GPA: 1.57
PROJECTS	Experimental Visual Playground (VOID.LAB) – HTML / CSS / JavaScript - Built an interactive generative art portfolio featuring three real-time canvas experiments: a magnetic particle repulsion field, a Perlin noise flow field, and a physics-based type disintegration system. - Implemented all physics simulations, vector field algorithms, and noise functions from scratch using the HTML5 Canvas API and vanilla JavaScript – no external libraries or frameworks. Flight Price Trend Analyzer – Python / Pandas / NumPy / Matplotlib - Built a dataset of 13,000+ synthetic flight price records for Philippine routes, simulating real-world pricing factors like holidays, booking windows, and day-of-week patterns. - Analyzed pricing trends using Pandas to surface insights such as the cheapest travel days and optimal booking timing (90–120 days in advance). - Created 4 data visualizations including heatmaps, trend lines, and violin plots, plus an interactive HTML dashboard to explore results in the browser.

2.0 Endorsement Letter

MS. JOVY ORDONIA

Regional HR Asia
STMicroelectronics
Light Industry and Science Park II, ST-Ericsson
9 Mountain Drive, Calamba, Laguna

Dear Ms. Ordonia,

The BS Computer Science program of Mapúa Malayan Colleges Laguna requires its students to undergo a Practicum program for a minimum of 480 hours during the third term of our academic calendar.

We would like to request that Mr. David Joseph N. Cortez be permitted to undergo training at your company. We believe your company can provide the exposure our students need to achieve the intended learning outcomes of the BS Computer Science program. We are confident that he will acquire the practical knowledge and skills expected of a Computer Science graduate, thereby ensuring a continuous supply of CS professionals for your company.

We thank you for your favorable action and look forward to a more meaningful partnership that is mutually beneficial to our students and your company.

With warm regards,

Jonathan G. Ebron

4.0 Liability Waiver

MAPÚA
MALAYAN COLLEGES
LAGUNA

REVISION NO.: 00
REVISION DATE: May 10, 2018

STUDENT TRAINING AGREEMENT AND LIABILITY WAIVER

IMPORTANT INFORMATION

- THIS FORM IS TO BE ACCOMPLISHED AND SUBMITTED BY STUDENT TRAINEE TO THE PRACTICUM ADVISER BEFORE STARTING THE PRACTICUM.
- READ AND UNDERSTAND THE PROVISIONS OF THIS AGREEMENT AND WAIVER.
- ENSURE THAT ALL SIGNATORIES SIGN THE FORM.

I, David Joseph N. Cortez, and a student of MALAYAN COLLEGES LAGUNA (hereinafter referred to as "MCL", do hereby voluntarily undergo on-the-job training at STMicronics, hereinafter referred to as the "Host Company", located at Light Industry and Science Park II, ST-Ericsson, 9 Mountain Dr. Calamba, Laguna, under the following terms and conditions:

a. That the practicum training will commence on May 4, 2028 and ends on July 24, 2028 and will have to complete a minimum of 480 hours required for the on-the-job training;

b. That I shall observe proper decorum and act professionally at all times and abide by the Company's rules and regulations and comply with those imposed for the training program, otherwise, I shall be excluded from further participation;

c. That in the course of my training program, I may have access to information which may be of confidential in nature and proprietary to the Company, for which I may be required to execute a confidentiality and non-disclosure agreement as a prerequisite to my participation in the training program;

d. That the time I will spend on the training program in the completion of my on-the-job training requirements will not and should not be interpreted or construed as working hours and should be regarded as non-compensable. Provided that, the Company may, as a unilateral act of liberality or generosity on their part, provide me with meal, travel, transportation allowances, accommodations, etc.;

e. That I fully understand that notwithstanding the allowances enumerated in the preceding section which I may receive, there exists no labor-management and/or employer/employee relationship between me and the Company where I will undergo my training;

f. That I shall exercise due care and diligence in the tasks assigned to me and personally be made answerable for any and all liabilities for damage to property or injury to third person, which may be occasioned by my intentional or negligent acts during the course of my on-the-job training;

g. That I shall likewise hold the Host Company and MCL free and harmless from any and all liability and responsibility for any sickness or injury to myself and third parties and damage to property which I may sustain and/or may occur at any time during the training program, including time spent in traveling to and from any and all premises and locations where I may be required to go to as part of my training program;

h. That the Company reserves the right to discontinue my training on reasonable grounds upon written notice to MCL and myself. Additionally, in the event my training program is discontinued for reasons attributable only to myself, I may be made to reimburse the Host Company for all the allowances, stipends, etc., which I may have received from them during and prior to the termination of my training program;

i. That in addition to my liability under section g and for the pre-termination of my training program provided for under section h hereof, I may be subjected further to disciplinary action in accordance with the school's student manual and/or be a ground for disqualification from graduation;

Signed on this _____ day of _____.

REVISION NO.: 00
REVISION DATE: May 10, 2018

TRAINING PLAN

NAME	David Joseph N. Cortez	COURSE CODE	CS199F
PROGRAM & STUDENT NO.	BS COMPUTER SCIENCE / 2022161544	COURSE TITLE	CS PRACTICUM

STUDENT OUTCOMES

CO1. Identify, analyze, and recommend solution to the computing problem being faced by the organization
CO2. Apply the different concepts in Computer Science in dealing with the problem-solving process of the organization, and
CO3. Acquire new knowledge and experience while in the organization.

AREAS / PHASES OF TRAINING AND TIME ALLOTMENT

HR Orientation - 8 hrs	Data Gathering - 60 hrs
Manufacturing Orientation - 29 hrs	System, Development, Process automation, Data Analytics - 328 hrs
Power BI Training - 29 hrs	Documentation, UST Evaluation, Project Presentation - 30 hrs
System familiarization - 60 hrs	

EVALUATION GUIDELINES & COURSE OUTCOMES

DEMONSTRATION OF SOFT SKILLS (40%)

KEY AREAS

COMMUNICATION SKILLS (20%)

Relate to co-trainees/supervisors terminologies and rules
Recite procedures and instructions needed for the tasks
Identify and describe safety signs and symbols
Ask critical questions related to the tasks
Produce well-written regular and incident reports
Prepares and presents reports using Information and Communication Technology (ICT)

PROFESSIONAL DEPORTMENT (20%)

Observes proper grooming and attire
Reports to work regularly on time and as necessary, even beyond prescribed working hour
Acts according to the job description given by the company
Willing to accept new tasks apart from the usual routine and responsibilities
Delivers quality output on time
Demonstrates respect for different individuals

INITIATIVE (+5%)

Volunteers to perform tasks beyond routine tasks

DEMONSTRATION OF TECHNICAL SKILLS (60%)

KEY AREAS

25 SKILLS (XX) Design, Develop, and deploy web-based systems to automate operational tasks within the production environment

20 SKILLS (XX) Efficiency in using Power BI to interpret Process, metrics, and present findings

25 SKILLS (XX) Able to write system documentation and process reports aligned with company standards

INITIATIVE (+5%)

- SCANNED COPIES OF THIS FORM SHALL BE SUBMITTED ON A WEEKLY BASIS THROUGH APPROVED LMS.
- HARD COPIES OF THIS FORM SHOULD BE COMPILED AS PART OF THE STUDENT'S PORTFOLIO.

DATE	May 4 - May 8	AREA ASSIGNMENT	Training Room
TASK	General Orientation	SHIFT/TIME	8:00AM - 5:30PM

Before the OJT even officially started, I was already hired under the Operations 2 & 3 department. My hiring manager was Sir Judioz Manejero, the manager of Operations 2.

Honestly, just knowing that ahead of time made me feel a little less nervous going into the first day. The whole first week was basically orientation.

We went through a lot — the company's history, its values, the organizational hierarchy, workplace policies, security rules, shift schedules, and allowance.

We also had OSH training, which I didn't expect to find that interesting, but it actually made me realize how seriously STMicroelectronics takes the safety of everyone inside the facility.

There was a lot to take in and I won't lie, my head was pretty full by the end of each day. But more than the information itself, what really got to me was just the feeling of being there.

Like, this is a real company. Not a school activity, not a mock setup — an actual company with real operations running every single day. Walking through the facility, sitting in those orientations, following actual company rules, it all just hit differently. It made me want to be more careful about

how I carry myself, how I talk, how I dress. I kept thinking, "okay, this is it." After all the orientations were done, we were finally assigned to our departments. I was placed in B2F2 (Building 2, 2nd Floor) where I got to meet my supervisors, Ma'am Marivic Perez and Ma'am Jhanet Florendo.

It was a short meeting but it felt like the moment everything became real. Week 1 was just the beginning, but it already left quite an impression on me.

DATE	May 11 - May 15	AREA ASSIGNMENT	Ops 2/3 Office
TASK	Project Planning	SHIFT/TIME	8:00AM - 5:30PM

Week 2 felt like the real shift from being an "orientation trainee" to actually being part of the department. It started with something I wasn't really expecting — a two-day Power BI training on Monday and Tuesday, from 9 AM to 12 PM. On the first day, we were taught how to clean and transform data, along with some basic tutorials on how Power BI works. There were a lot of features and functions to take in within just a few hours. But by the end of the session, things were starting to make more sense and I could see how useful it actually is for data visualization and reporting. The second day was more hands on. We were grouped together and given dummy datasets, then tasked to apply everything we learned the day before. It was a good challenge because we had to actually think about how to structure and present the data, not just follow along with a tutorial. After working on it as a group, we presented our output and it was a nice feeling to see something come together that we actually built ourselves, even if it was just a practice run. After the Power BI training, we were taken on a tour of the production line under our department. That was probably one of the most eye-opening parts of the week for me. Seeing the actual products and understanding the process step by step gave me a much better picture. Then came the big news for me — my actual project for the OJT. I was tasked to build a website for their MBO Reports. Right now, the team still relies on manual inputs for these reports, which takes up a lot of time and leaves room for errors. My job is to make that process more efficient by turning it into a proper system. The production line tour actually helped a lot here because it gave me a clearer idea of what the reports are about and how I can approach building the system. I'm a little nervous about it, but also genuinely excited. This feels like something that could actually make a difference for the team.

DATE	May 18 - May 22	AREA ASSIGNMENT	Ops 2/3 Office
TASK	Project Initiation	SHIFT/TIME	8:00AM - 5:30PM

Week 3 started with my supervisors and manager finalizing the objectives and scope of the system I was assigned to build, so I finally had a clear picture of what I needed to do. After that, I worked on getting access to VS Code and the libraries I needed since those are the main tools I'll be using throughout the project. Once I had everything set up, I interviewed some of the technicians and engineers to understand how they actually do their MBO reports — I also asked for copies of the actual reports so I could review them and make sure what I'd be building matches what they really need. With all that done, I started working on the system itself. I built the basic input fields for the website and added validations for each one so the data entered would be correct. I also drafted the CSS and added an auto-save feature so users won't have to worry about losing their progress. At the end of the week, the manager held a meeting where I presented my progress to the engineers and technicians. Their feedback was really helpful and gave me a better idea of what to focus on next week.

DATE	May 25 - May 29	AREA ASSIGNMENT	Ops 2/3 Office
TASK	System Development	SHIFT/TIME	8:00AM - 5:30PM

Week 4 went by faster compared to the previous weeks. With the feedback I got from the engineers last week, I was able to move quicker on building out the website. The biggest challenge this week was working on the actual import and export feature for the MBO Report, it gave me a hard time, but I managed to push through and I'm now at around 80% progress on that part, so I'd say that's still a good sign. On Tuesday, I attended a short webinar called Career Insights, where Gang Wu, MDG Technical Marketing Sr. Manager at STMicroelectronics, was the speaker. It was a nice break from the technical work and the session gave I also started setting up Flask and Python for the backend, along with a database, to prepare for when the system needs to save MBO reports internally. It's not the main focus yet but it's good to have it ready for future use. My supervisors continued to give me insights and suggestions whenever I felt stuck or ran out of ideas, which honestly helped a lot in keeping my progress steady. Overall, Week 4 felt like a good week. I'm happy with how things are going so far, the progress has been consistent and I feel like I'm learning a lot not just technically but also in terms of how real workplace systems are built and maintained.

DATE	June 1 - 5	AREA ASSIGNMENT	Ops 2/3 Office
TASK	Workflow Design	SHIFT/TIME	8:00AM - 5:30PM

This week, I continued working on the MBO Sawing Report System after finishing the import and export feature last week started focusing more on how to organize the Excel-based report into a proper system flow. I reviewed the actual report structure and thought about how each worksheet or section should be turned into pages inside the application. My goal was to make the reporting process easier to follow compared to the manual Excel setup. While doing this, I realized that building the system is not just about transferring data fields into a website, but also about improving the overall user flow and making the process more organized and easier to use.

DATE	June 8 - 12	AREA ASSIGNMENT	Ops 2/3 Office
TASK	Validation Logic	SHIFT/TIME	8:00AM - 5:30PM

During this week, I continued developing the MBO Sawing Report System by improving the page flow, report structure, and form behavior. report structure, and form behavior. I worked on how users would move through the report and how the system should respond to required and incomplete fields. I also reviewed how imported and saved data should be restored properly so that users could continue their work without losing progress. This week helped me understand more about how system logic, validation, and data handling all need to work together. Compared to using Excel manually, I could already see how the system was becoming more helpful in guiding the user through the reporting process.

DATE	June 22 - June 26	AREA ASSIGNMENT	Ops 2/3 Office
TASK	Dual Projects	SHIFT/TIME	8:00AM - 5:30PM

This week, I continued improving the MBO Sawing Report System while also starting my work on the ODIFF Product Portfolio. For the MBO system I continued adding and refining functions related to the report structure, workflow behavior, and user interaction. At the same time, I started familiarizing myself with the ODIFF system and how it is used to manage product and process reference data. I reviewed how products, materials, documents, and process flow content were organized in the portal. This week gave me experience handling two different system tasks at the same time, which helped me improve my ability to adjust and manage multiple technical responsibilities.

DATE	June 29 - July 3	AREA ASSIGNMENT	Ops 2/3 Office
TASK	Module Development	SHIFT/TIME	8:00AM - 5:30PM

During this week, I continued developing more modules and functions for the MBO Sawing Report System while also spending more time on the ODIFF Product Portfolio. For the MBO system, I focused on making the overall report process more complete by refining workflow-specific behavior user guidance, and structured modules that support the reporting process. For ODIFF, I became more familiar with how the portal centralizes product-related content that would otherwise be spread across files, folders, and manual references. This week helped me realize how both systems solve different operational problems: one improves reporting workflow, while the other improves access to reference information.

This week, I focused on further refining the MBO Sawing Report System and continued supporting work on the ODIFF Product Portfolio. For the MBO system, I continued improving features that directly address the department's reporting issues, such as workflow behavior, validation, report handling, and user-facing structure. I also reviewed ODIFF and better understood how it supports centralized product and process reference management. One thing I learned this week is that developing internal systems in a real work environment involves many revisions, updates, and improvements based on how the users and supervisors expect the system to work. It made me realize that system development is not only about implementation, but also about making the final product practical and useful.
